## Foreword

Melghat Tiger Reserve is situated in Maharashtra. Melghat means a place where several hills (Ghats) meet. Its topography is marked naturally by highly undulating hills and deep valleys, offering great diversity in landscape flora as well as fauna. Melghat Tiger Reserve is first of the initial nine Tiger Reserve in Project Tiger Network launched in 1973.

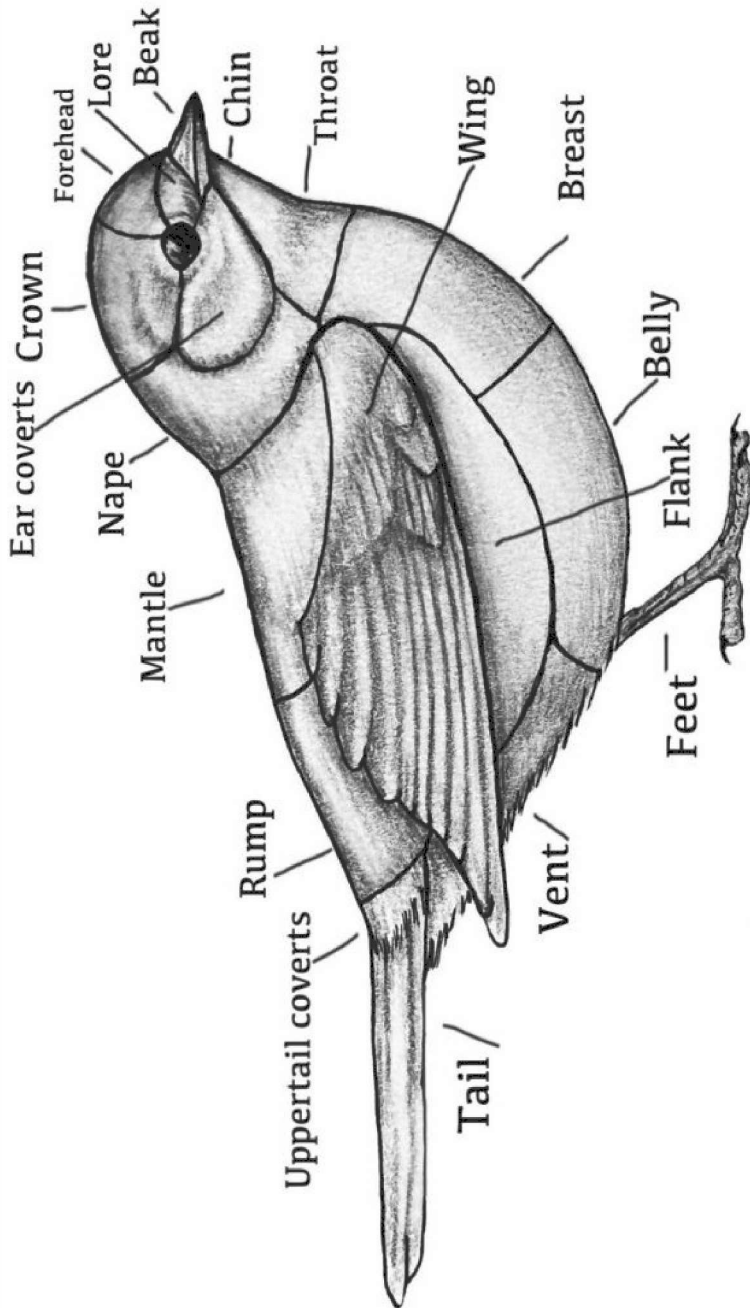

Previously 265 birds were documented from the Melghat Tiger Reserve landscape. The first ever bird survey of Melghat Tiger Reserve was organized from 26<sup>th</sup> to 29<sup>th</sup> January 2023 in which 70 bird experts from various parts of India participated and reported a total of 340 bird species. It indicates that Melghat has a rich Avifauna diversity of various bird families. This is a good indicator of healthy biodiversity of Melghat landscape. The contents of this book are well researched and documented. I am sure it will capture the interests of all nature lovers around the country.

I appreciate the tireless efforts of frontline staff, associated NGOs and individuals who have continuously worked to protect the wilderness of Melghats and make this landscape a safe home for wildlife. I hope this sincere work done by birders will be helpful for the forester community and budding birders as well.

*Best Wishes...!*
